

**Mad River Watch Site Profile**

**FOLSOM BROOK**

**Site Coordinates:** 44.153111, -72.837278

**Site Location Description:** Route 100, Waitsfield, north of Bundy Road and south of Ralston Road.

**Parking and Access:** Parking is a little tricky. Park either on the side of Bundy Road, or at the end of the driveway on the east side of Route 100.

**Sampling Location:** Sample on the southeast side of Route 100. Walk through the open grassy area, past a lone birch, and walk carefully down to the brook. The culvert will be on your left.

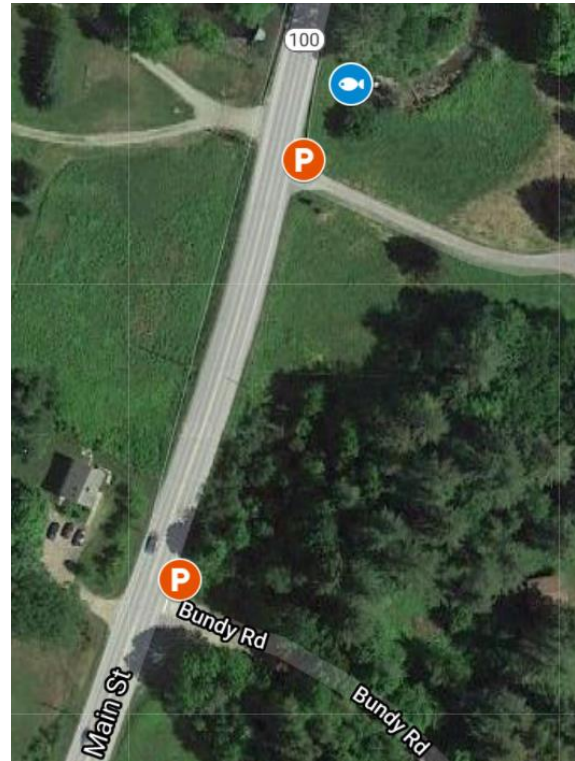

**Ease of Access:** Easy walk to the bank, then more difficult the last few steps to the side of the brook. Not steep, but uneven ground.

**Analytes:** Temperature, conductivity, pH

**Riparian Buffer Description:** Grassy and shrubby on one side, wooded

**Naturalist Notes (Ecology, History, Wildlife, Plant Species, etc.):** White-tailed deer on game trail crossing the brook

**Other Comments:** Parking is tough because traffic is often quite heavy on Route 100 and there is a hill in either direction. Make sure you are parked completely off the travel lane.
