

Mad River Watch Site
Profile
HOOPER LANE

Site Coordinates: 44.29702, -72.70135

Site Location Description: End of Hooper Lane, off Route 100B, Moretown.

Parking and Access: Park on the side of the road before the bridge - do not block the driveway. At the bridge, go over the guardrail just before the concrete blocks on the left. Walk down the steep bank.

Sampling Location: At the base of the steep bank, there are bedrock outcroppings. Walk carefully down to the edge of the river to sample.

Ease of Access: Steep and somewhat slippery. There is a trail but it is quite eroded. Take care!

Analytes: Temperature, Conductivity, P, N

Riparian Buffer Description: Exposed rock outcrops along both sides of the river. Mostly forested above rocky areas.

Naturalist Notes (Ecology, History, Wildlife, Plant Species, etc.): River narrows here due to bedrock formations.

Other Comments: Private property on the right side of Hooper Lane. Watch for poison ivy on the way down to the sampling site.
